This document contains proprietary information about AIC® products and is not to be disclosed or used except in accordance with applicable agreements.

Preface

Copyright

No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, electronic, mechanical, photo-static, recording or otherwise, without the prior written consent of the manufacturer.

Trademarks

All products and trade names used in this document are trademarks or registered trademarks of their respective holders.

Changes

The material in this document is for information purposes only and is subject to change without notice.

Warning

1. A shielded-type power cord is required in order to meet FCC emission limits and also to prevent interference to the nearby radio and television reception. It is essential that only the supplied power cord be used.
2. Use only shielded cables to connect I/O devices to this equipment.
3. You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void your authority to operate the equipment.

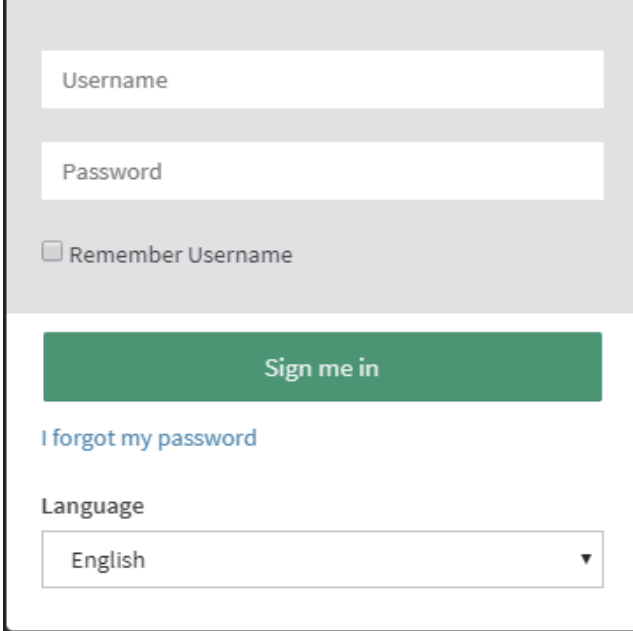

Disclaimer

AIC[®] shall not be liable for technical or editorial errors or omissions contained herein. The information provided is provided "as is" without warranty of any kind. To the extent permitted by law, neither AIC[®] or its affiliates, subcontractors or suppliers will be liable for incidental, special or consequential damages including downtime cost; lost profits; damages relating to the procurement of substitute products or services; or damages for loss of data, or software restoration. The information in this document is subject to change without notice.

Chapter 1. Login Information

1.1 User Name and Password

Initial access prompts you to enter the User Name and Password. A sample screenshot of the login screen is given below.

The screenshot shows a login form with the following elements:

- A text input field labeled "Username".
- A text input field labeled "Password".
- A checkbox labeled "Remember Username".
- A green button labeled "Sign me in".
- A blue link labeled "I forgot my password".
- A dropdown menu labeled "Language" with "English" selected.

The fields are explained as follows:

Username: Enter your username in this field.

Password: Enter your password in this field.

Remember Username: Check this option to remember your login Username. If you select this option, the browser will save your credentials internally in its memory, and when you open that site the next time, it will auto-fill Username for you.

Sign me in: After entering the required credentials, click the [Sign me in](#) to login.

I Forgot my Password: If you forget your password, you can generate a new password using this link.

Language: Select the language of Web GUI, you can choose English, Traditional Chinese or Simplified Chinese.

NOTE

Default username and password

- Username: admin
- Password: 123456789

Password Change

When the BMC is updated, the default username and password will be changed to

- Username: admin
- Password: password

Enter to change the user's password.

Chassis ID

Before updating the BMC, enter the command below to login with the correct version.

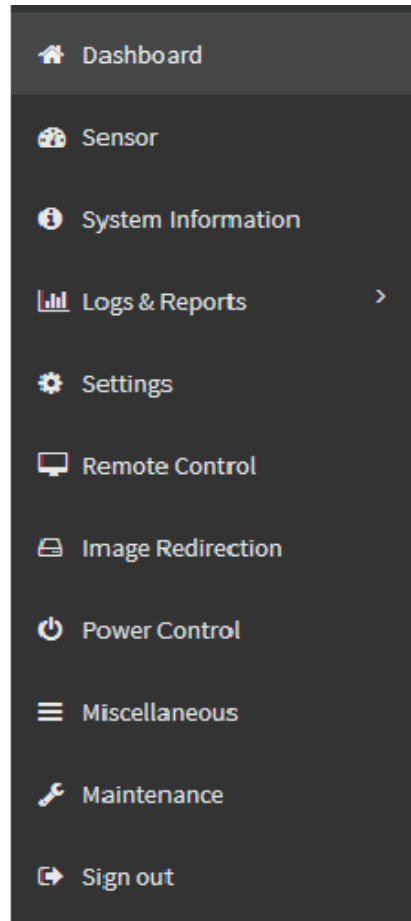

```
ipmitool -I lanplus -H <ip> -U <user> -P <password>raw 0x3a 0xaa 0x53 0x42 0x31 0x30  
0x31 0x2d 0x41 0x36
```

1.2 Menu Bar

The menu bar displays the following.

Firmware Information will be displayed with the latest version, date and time details.

- Dashboard
- Sensor
- System Information
- Logs & Reports
- Settings
- Remote Control
- Image Redirection
- Power Control
- Miscellaneous
- Maintenance
- Sign out

1.3 Quick Button and Logged-in User

The user information and quick buttons are located at the top right. A screenshot of the logged-in user information is shown below.

User Information

The logged-in user information shows the logged-in user, his/her privilege and the four quick buttons allowing you to perform the following functions.

Administrator: All BMC commands are allowed.

Sync: Click the  Sync icon to synchronize with Latest Sensor and Event Log updates.

Refresh: Click the  Refresh icon or pressing key F5 to reload the current page.

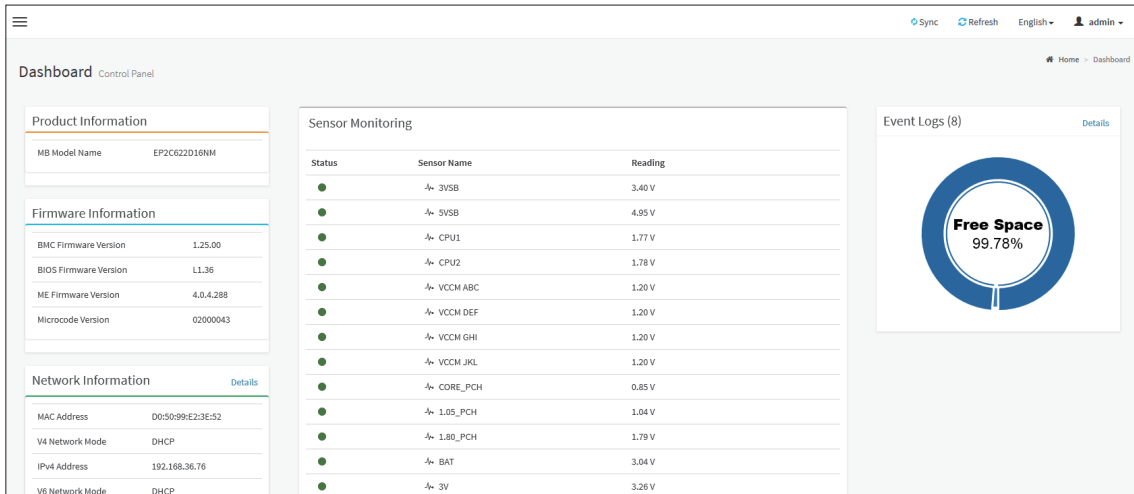

Language Selection: Change the language to view the language strings in different languages.

Signout: Click the  Sign out icon to log out.

Chapter 2. Dashboard

The Dashboard page gives the overall information about the status of a device.

To open the Dashboard page, click [Dashboard](#) from the menu bar. A sample screenshot of the Dashboard page is shown below.

2.1 Firmware Information

The Firmware Information displays the following information.

BMC Firmware Version: Displays the BMC firmware version of the device.

BIOS Firmware Version: Displays the BIOS firmware version of the device.

ME Firmware Version: Displays the ME (or PSP) firmware version of the device.

Microcode Version: Displays the microcode version of the device.

CPLD Version: Displays the version of CPLD of the device.

NOTE

BIOS version, ME (or PSP) version and Microcode version will be refreshed when the system POST, please restart the system if you see nothing on screen.

2.2 Network Information

The Network Information of the device with the following fields is shown here. Click Details to view more information.

MAC Address: Read-only field shows the MAC address of the device.

V4 Network Mode: The v4 network mode of the device can be either static or DHCP.

IPv4 Address: The IPv4 address of the device can be static or DHCP.

V6 Network Mode: The v6 network mode of the device can be either static or DHCP.

IPv6 Address: The IPv6 address of the device can be static or DHCP.

2.3 Sensor Monitoring

Here lists all the available sensors on the device with the following information.

Status: This column displays the state of the device.

- Normal state ●
- Critical State ●
- Not Available ●

Sensor Name: Displays the name of the sensor.

Reading: Displays the value of sensor readings.

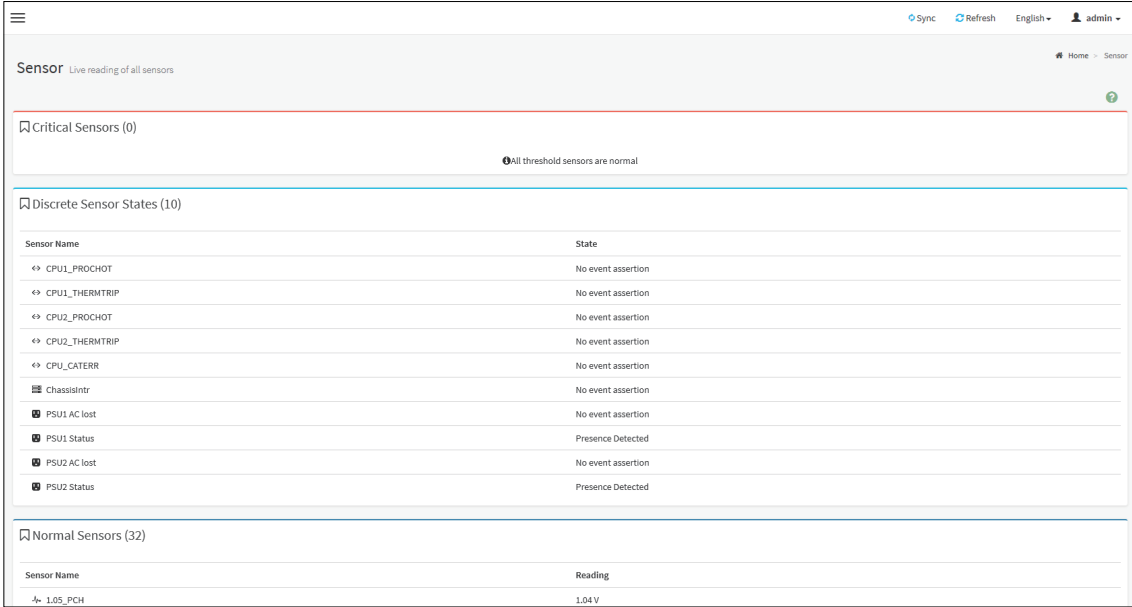

2.4 Event Logs

Here displays a graphical representation of all events and occupied/available space in logs. Click Details to view more information.

Chapter 3. Sensor

The Sensor Reading page displays all the sensor related information.

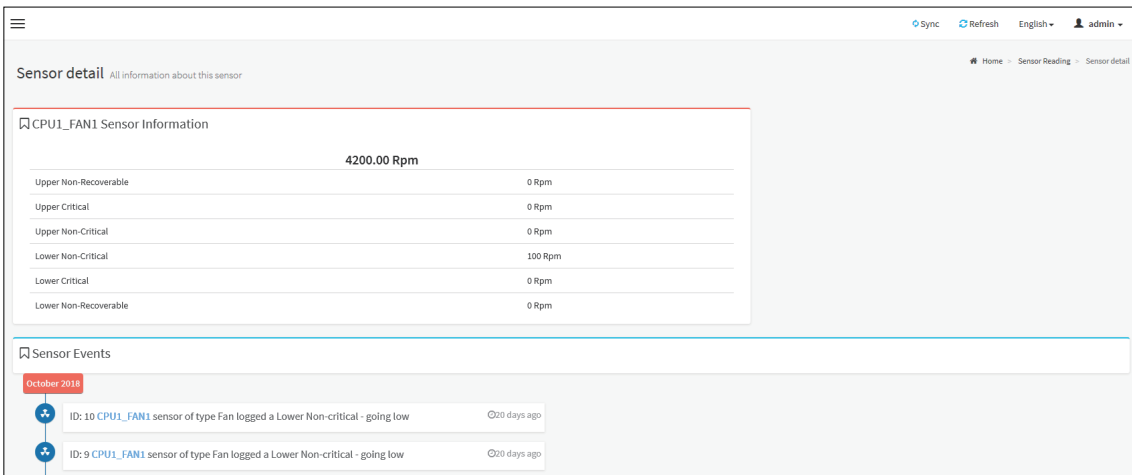

To open the Sensor Reading page, click [Sensor](#) from the menu. Click on any sensor to show more information about that particular sensor, including thresholds and a graphical representation of all associated events. A screenshot of Sensor Reading page is given below.

In this Sensor Reading page, Live readings for all the available sensors with details like Sensor Name, Status and Current Reading are shown.

Sensor detail:

Select a particular Sensor from the Critical Sensor or Normal Sensor lists. The Sensor Information as Thresholds for the selected sensor will be displayed as shown below.

Types of the thresholds:

- Lower Non-Recoverable (LNR)
- Lower Critical (LC)
- Lower Non-Critical (LNC)
- Upper Non-Recoverable (UNR)
- Upper Critical (UC)
- Upper Non-Critical (UNC)

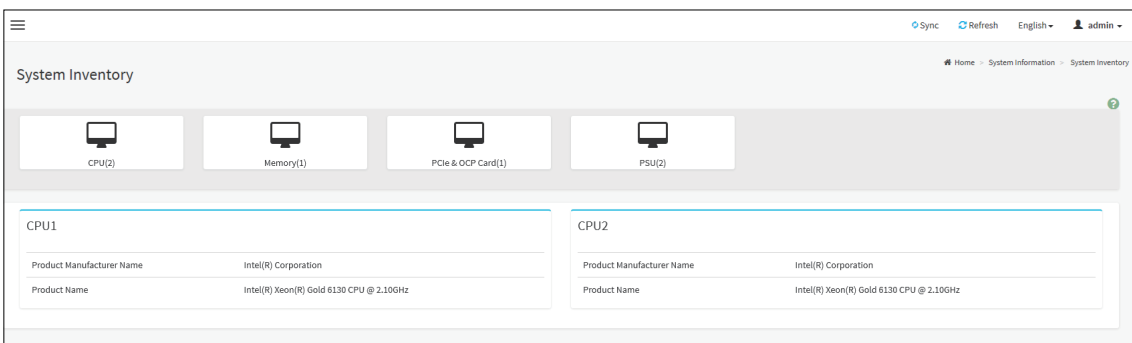

Chapter 4. System Information

This group of pages allows you to view system information.

4.1 System Inventory

This page displays detailed information of active devices. Select a group to view more information.

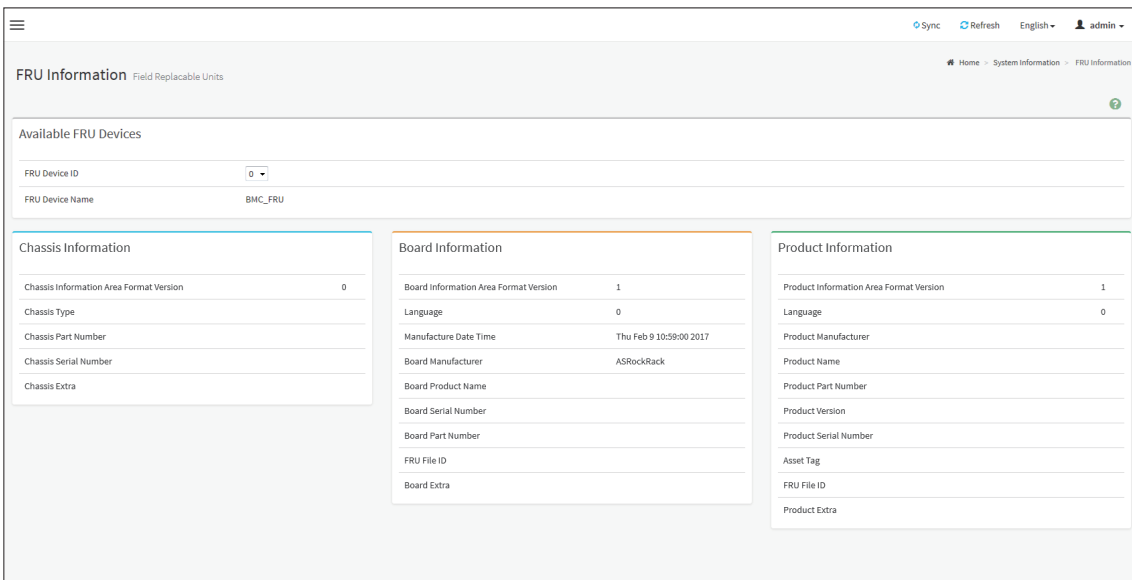

NOTE

1. The information will be refreshed when the system POST, please restart the system if you see nothing on screen.
2. The information on this page may differ by platforms, and this page may not be available for certain platforms.

4.2 FRU Information

This page displays the FRU information. Select a FRU Device ID from the FRU Information section to view the details of the selected device.

4.1.3 Power Source

This page displays the PSU information. Please make sure that the PSU supports PMBus.

The screenshot shows a web interface titled "Power Source" with two columns of data for Slot 1 and Slot 2. The interface includes a navigation bar with "Sync", "Refresh", "English", and "admin" options, and a breadcrumb trail: "Home > System Information > Power Source".

Slot 1 Status		Slot 2 Status	
Power Supply Status	Power Supply OK	Power Supply Status	Power Supply OK
AC Input Voltage	118 V	AC Input Voltage	118 V
AC Input Current	0.76 A	AC Input Current	0.97 A
DC 12V Output Voltage	12.11 V	DC 12V Output Voltage	12.1 V
DC 12V Output Current	5.2 A	DC 12V Output Current	6.8 A
Temperature 1	25 °C	Temperature 1	28 °C
Temperature 2	40 °C	Temperature 2	40 °C
Fan 1	10000 RPM	Fan 1	8300 RPM
Fan 2	N/A	Fan 2	N/A
DC 12V Output Power	64 W	DC 12V Output Power	84 W
AC Input Power	85 W	AC Input Power	110 W
PWS Serial Number	HCUUD1519001378	PWS Serial Number	IDGD16Z2000040

Power Supply Status: Displays the PSU status is normal or not.

AC Input Voltage: Displays the input voltage of the PSU.

AC Input Current: Displays the input current of the PSU.

DC 12V Output Voltage: Displays the output voltage of the PSU.

DC 12V Output Current: Displays the output current of the PSU.

Temperature 1: Displays the temperature 1 of the PSU.

Temperature 2: Displays the temperature 2 of the PSU.

Fan 1: Displays the fan speed 1 of the PSU.

Fan 2: Displays the fan speed 2 of the PSU.

DC 12V Output Power: Displays the output power of the PSU.

AC Input Power: Displays the input power of the PSU.

PWS Serial Number: Displays the serial number of the PSU.

Chapter 5 Logs & Reports

5.1 IPMI Event Log

This page displays the list of event logs occurred by the different sensors on this device. Double click on a record to see the details of that entry. You can use the sensor type or sensor name filter options to view those specific events or you can also sort the list of entries by clicking on any of the column headers.

The screenshot shows the IPMI Event Log interface. At the top, there are navigation links for Sync, Refresh, English, and a user profile for 'admin'. Below this, the page title is 'IPMI Event Log' with a sub-header 'All sensor event logs'. There are filter options: 'All Events' (selected), 'Filter by: All Sensors', and 'Client Timezone' (selected). The table below contains 14 entries. At the bottom, there are five buttons: 'Clear MCA Log', 'Download MCA Log', 'Clear Event Logs', 'Download Event Logs', and 'Download Event Logs Raw Data'.

Event ID	Time Stamp	Sensor Name	Sensor Type	Description
14	10/25/2018, 12:58:14	SPS / ME	Boot Up	NM OEM Record - Asserted
13	10/25/2018, 12:58:13	SPS / ME	Microcontroller / Coprocessor	Transition to Running - Asserted
12	10/25/2018, 12:58:07	CPU1_CATERR	Processor	State Asserted - Deasserted
11	10/25/2018, 12:57:38	CPU1_CATERR	Processor	State Asserted - Asserted
10	10/25/2018, 10:21:23	CPU1_FAN1	Fan	Lower Non-critical - going low - Deasserted
9	10/25/2018, 10:21:21	CPU1_FAN1	Fan	Lower Non-critical - going low - Asserted
8	10/25/2018, 10:08:09	BIOS	System Event	Timestamp Clock Synchron - Asserted
7	10/25/2018, 10:08:08	Unknown	System Event	Timestamp Clock Synchron - Asserted
6	11/14/2018, 17:56:58	Unknown	System Event	Timestamp Clock Synchron - Asserted
5	11/14/2018, 17:56:58	BIOS	System Event	Timestamp Clock Synchron - Asserted
4	Pre-init Timestamp	PSU2 Status	Power Supply	Presence detected - Asserted
3	Pre-init Timestamp	PSU1 Status	Power Supply	Presence detected - Asserted
2	Pre-init Timestamp	PSU1 VIN	Voltage	Upper Critical - going high - Deasserted
1	Pre-init Timestamp	PSU1 VIN	Voltage	Upper Critical - going high - Asserted

Filter By Type: The category can be All Events, System Event Records, OEM Event Records, BIOS Generated Events, SMI Handler Events, System Management Software Events, System Software - OEM Events, Remote Console software Events, or Terminal Mode Remote Console software Events.

Filter By Sensor: Filtering can be done with the sensors mentioned in the list.

BMC Timezone: Displays the events with BMC UTC Offset timestamp.

Client Timezone: Displays the events with Client UTC Offset timestamp.

UTC Offset: Displays the current UTC Offset value based on which event Time Stamps will be updated.

Clear MCA Log: To delete MCA log.

Download MCA Log: To download the existing MCA log.

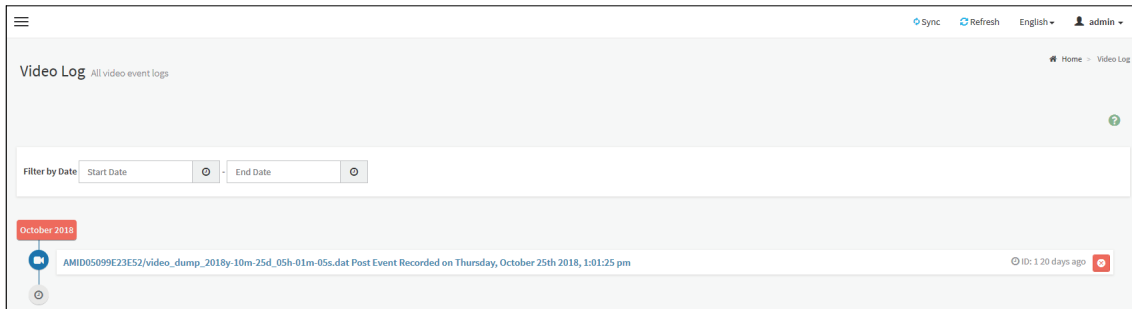

Clear Event Logs: To delete all the event logs.

Download Event Logs: To download all the existing Event Log records as text file.

Download Event Logs Raw Data: To download all the existing Event Log records as hex format file.

5.2 Video Log

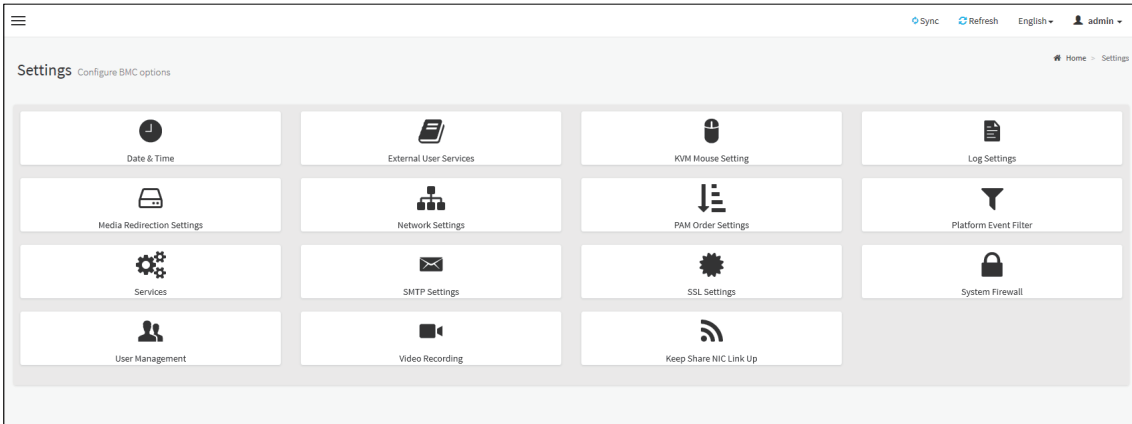

This page displays the list of video logs occurred by the different events on this device.

Filter By Date: Filtering can be done by selecting Start Date and End Date.

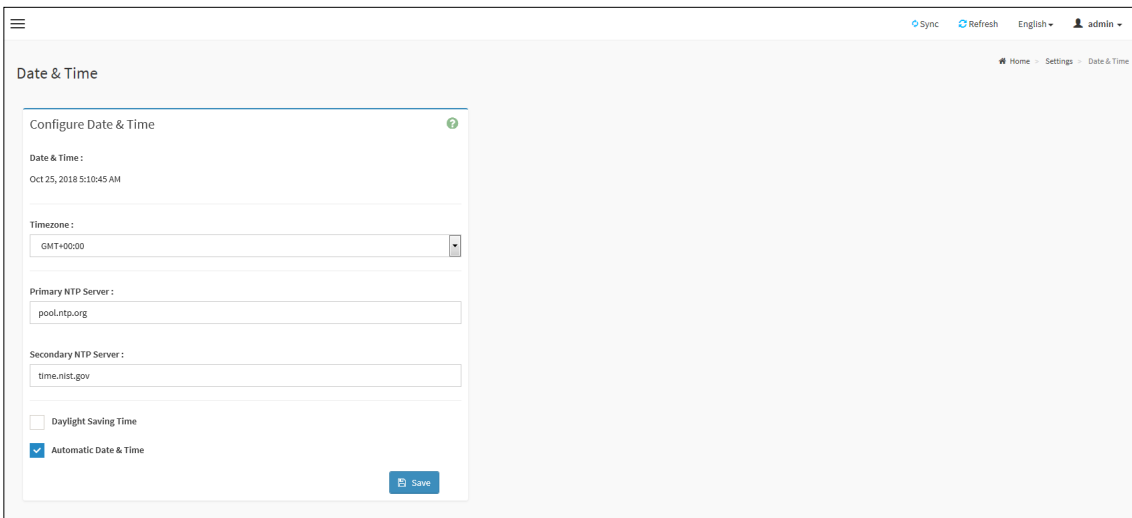

Chapter 6. Settings

This group of pages allows you to access various configuration settings. A screenshot of Configuration Group menu is shown below.

6.1 Data & Time

This page allows administrator to set the date and time on the BMC. It can be used to configure either Date & Time or NTP (Network Time Protocol) server settings for the device.

Date & Time: To specify the current date and time of the device.

Timezone: Timezone list contains the UTC offset along with the locations and Manual UTC offset for NTP server, which can be used to display the exact local time.

Primary NTP Server: To configure a primary NTP server to use when automatically setting the date and time.

Secondary NTP Server: To configure a secondary NTP server to use when automatically setting the date and time.

Daylight Saving Time: Enable daylight saving time for the device.

Automatic Date & Time: To automatically synchronize Date and Time with the NTP Server.

6.2 External User services

This page is used to configure the external service.

6.2.1 LDAP/E-directory Settings

LDAP is an Internet protocol that BMC can use to authenticate users. If you have an LDAP server configured on your network, you can use it as an easy way to add, manage and authenticate web users. This is done by passing login requests to your LDAP Server.

6.2.1.1 General LDAP/E-directory Settings:

This page is used to configure LDAP/E-Directory settings.

Enable LDAP/E-Directory Authentication: Check the box to enable LDAP/E-Directory authentication.

Encryption Type: Select the encryption type for LDAP/E-Directory.

Common Name Type: Select the Common Name Type for LDAP/E-Directory.

Server Address: The IP address(IPv4 or IPv6) of LDAP/E-Directory server.

Port: The port of LDA/E-Directory server.

Bind DN: The Bind DN is used during bind operation, which authenticates the client to the server.

Password: The password of LDA/E-Directory server.

Search Base: The Search base tells the LDAP server which part of the external directory tree to search. The search base may be something equivalent to the organization, group of external directory.

Attribute of User Login: To find the LDAP/E-Directory server which attribute should be used to identify the user.

CA Certificate File: To identify the certificate of the trusted CA certs.

Certificate File: To find the client certificate filename.

Private Key: To find the client private key filename.

6.2.1.2 Role Groups:

This page is used to add a new role group to the device. Alternatively, double click on a free slot to add a role group.

Group Name: Enter the name that identifies the role group.

Group Domain: Enter the Role Group Domain where the role group is located.

Group Privilege: Enter the level of privilege (User, Administrator, Operator, OEM, None) to assign to this role group.

KVM Access: Check the box to enable KVM access for the group.

VMedia Access: Check the box to enable VMedia access for the group.

6.2.2 Active directory Settings

An active directory is a directory structure used on Microsoft Windows based computers and servers to store information and data about networks and domains. Active Directory allows you to configure the Active Directory Server Settings. The displayed table shows any configured Role Groups and the available slots. You can modify, add or delete role groups from here. Group domain can be the AD domain or a trusted domain. Group Name should correspond to the name of an actual AD group.

6.2.2.1 General Active Directory Settings:

This page is used to configure Active Directory general settings.

Enable Active directory Authentication: Check box to enable Active Directory Authentication.

Secret User Name: The Username of the Active Directory Server.

Secret Password: The Password of the Active Directory Server.

User Domain Name: The Domain Name for the user. E.g. MyDomain.com

Domain Controller Server Address1, Domain Controller Server Address2 & Domain Controller Server Address3: The IP address of Active Directory server.

6.2.2.2 Role Groups:

This page is used to add a new role group to the device. Alternatively, double click on a free slot to add a role group.

Group Name: Enter the name that identifies the role group.

Group Domain: Enter the Role Group Domain where the role group is located.

Group Privilege: Enter the level of privilege (User, Administrator, Operator, OEM, None) to assign to this role group.

KVM Access: Check the box to enable KVM access for the group.

VMedia Access: Check the box to enable VMedia access for the group.

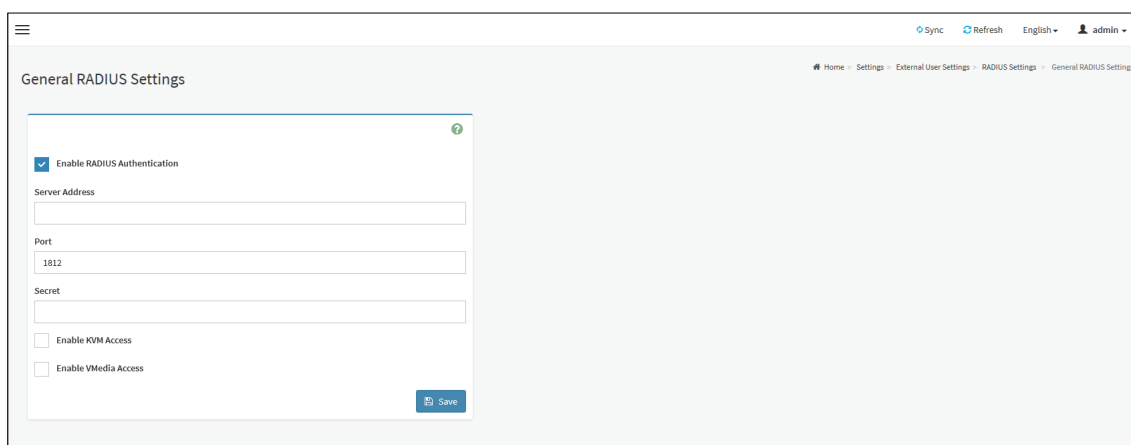

6.2.3 RADIUS Settings

RADIUS is a modular, high performance and feature-rich RADIUS suite including server, clients, development libraries and numerous additional RADIUS related utilities. You can set the RADIUS Authentication from here.

6.2.3.1 General RADIUS Settings:

This page is used to configure Radius general settings.

Enable RADIUS Authentication: Check the box to enable Radius authentication.

Server Address: The IP address of Radius server.

Port: The port number of Radius server.

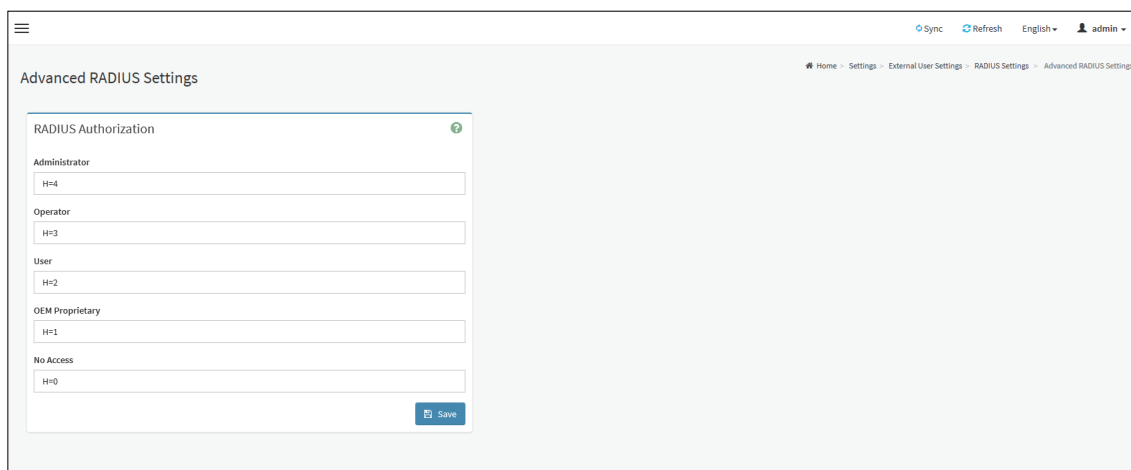

Secret: The authentication secret of Radius server.

KVM Access: Check the box to enable KVM access for Radius authenticated users.

VMedia Access: Check the box to enable VMedia access for Radius authenticated users.

6.2.3.2 Advanced RADIUS Settings:

This page is used to configure Advanced Radius authorization setting.

Administrator: Configure Administrator with Vendor Specific Attribute in Server side.

Operator: Configure Operator with Vendor Specific Attribute in Server side.

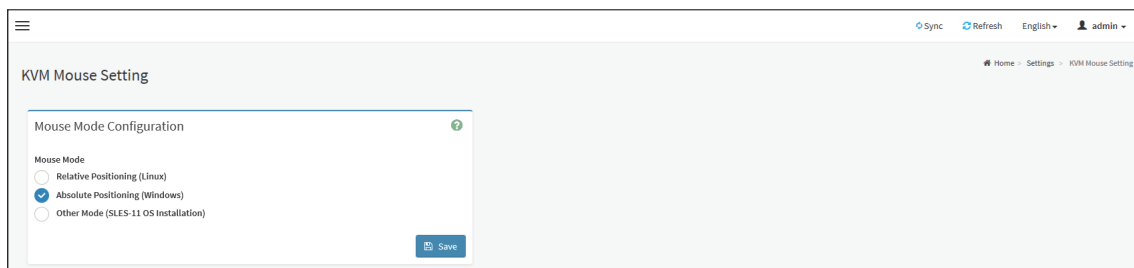

User: Configure User with Vendor Specific Attribute in Server side.

OEM Proprietary: Configure OEM Proprietary with Vendor Specific Attribute in Server side.

No Access: Configure No Access with Vendor Specific Attribute in Server side.

6.3 KVM Mouse Setting

The Redirection Console handles mouse emulation from local window to remote screen in either of three methods.

Relative Positioning (Linux): Relative mode sends the calculated relative mouse position displacement to the server.

Absolute Positioning (Windows): The absolute position of the local mouse is sent to the server.

Other Mode (SLES-11 OS Installation): To have the calculated displacement from the local mouse in the center position sent to the server.

6.4 Log Settings

6.4.1 Log Settings Policy

This page is used to configure the log policy for the event log.

Linear Storage Policy: Check the option to enable linear storage policy for the event log.

Circular Storage Policy: Check the option to enable circular storage policy for the event log.

6.5 Media Redirection

This page is used to configure the media into BMC for redirection.

6.5.1 General Settings

This page is used to configure general media settings.

The screenshot shows the 'General Settings' page with the following configuration options:

- Remote Media Support:** (checked)
- Mount CD/DVD:** (checked)
 - Server Address for CD/DVD Images: [Server IP or Host name]
 - Path in server: [eg, /opt/bmc/nfs]
 - Share Type for CD/DVD: nfs cifs
 - Domain Name: []
 - Username: []
 - Password: []
- Same settings for Floppy/Harddisk Images:** (unchecked)
- Mount Floppy:** (checked)
 - Server Address for Floppy Images: [Server IP or Host name]
 - Path in server: [eg, /opt/bmc/nfs]
 - Share Type for Floppy: nfs cifs
 - Domain Name: []
 - Username: []
 - Password: []
- Mount Harddisk:** (checked)
 - Server Address for Harddisk Images: [Server IP or Host name]
 - Path in server: [eg, /opt/bmc/nfs]
 - Share Type for Harddisk: nfs cifs
 - Domain Name: []
 - Username: []
 - Password: []

A 'Save' button is located at the bottom right of the form.

Remote Media Support: Check the box to enable Remote Media support.

Mount CD/DVD: Check the box to enable Mount CD/DVD support.

Server Address for CD/DVD Images: Displays the address of the server where the remote media images are stored.

Path in server: Displays the Source path to the remote media images.

Path in server: Displays the Share Type of the remote media server either NFS or CIFS.

Domain Name: If share Type is Samba(CIFS), then enter domain name to authenticate on the server.

Username: If share Type is Samba(CIFS), then enter username to authenticate on the server.

Password: If share Type is Samba(CIFS), then enter password to authenticate on the server.

Same settings for Floppy/Harddisk Images: Enable/Disable to select same media type data configurations for all the remote media types.

Mount Floppy: Check the box to enable Mount Floppy support.

Server Address for Floppy Images: Displays the address of the server where the remote media images are stored.

Path in server: Displays the Source path to the remote media images.

Share Type for Floppy: Displays the Share Type of the remote media server either NFS or CIFS.

Mount Harddisk: Check the box to enable Mount Harddisk support.

Server Address for Harddisk Images: Displays the address of the server where the remote media images are stored.

Path in server: Displays the Source path to the remote media images.

Share Type for Harddisk: Displays the Share Type of the remote media server either NFS or CIFS.

6.5.2 VMedia Instance Settings

This page is used to configure virtual media device settings.

Floppy device instances: The number of floppy devices supported for Virtual Media redirection.

CD/DVD device instances: The number of CD/DVD devices supported for Virtual Media redirection.

Harddisk instances: The number of harddisk devices supported for Virtual Media redirection.

Encrypt Media Redirection Packets: Check the box to enable Media Encryption support.

Power Save Mode: To enable or disable the virtual USB devices visibility in the host. If this option is enabled, Virtual media devices will be connected to the Host machine only at the instance launching KVM session. If this option is disabled, Virtual media devices will remain connected to the host machine all the time irrespective of KVM session status.

6.5.3 Remote Session

This page is used to configure remote session configuration settings.

KVM Single Port Application: Check the box to enable single port support when using JViewer(Java KVM). On changing this configuration, KVM and VMedia Sessions will be restarted. If this support is enabled, KVM session will not use its dedicated port whereas both Web and KVM sessions will be established only via Web Port. If this support is disabled, KVM and Web sessions will use their own dedicated ports respectively.

Enable KVM Encryption: Check the box to enable KVM Encryption for the next redirection session when using JViewer(Java KVM). If KVM Encryption is enabled, the KVM session will use the Secure port.

Keyboard Language: This option is used to select the keyboard supported languages for both H5Viewer(HTML5 KVM) and JViewer(Java KVM).

Retry Count: This option is used to retry the redirection session for certain number of attempts.

Retry Time Interval(Seconds): This option is used to give time interval for each attempts.

Automatically OFF Server Monitor, When KVM Launches: Check the box to enable Automatically OFF Server Monitor, When KVM Launches.

NOTE

It will automatically close the existing remote redirection either KVM or Virtual media sessions on Single Port enable/Disable or KVM Encryption Enable/Disable.

6.6 Network Settings

This page is used to configure the network settings for the available LAN channels.

6.6.1 Network IP Settings

This page is used to configure the network IP settings.

The screenshot shows the 'Network IP Settings' page. At the top right, there are links for 'Sync', 'Refresh', 'English', and a user profile 'admin'. The breadcrumb trail is 'Home > Settings > Network Settings > Network IP Settings'. The main form area contains the following fields:

- Enable LAN
- LAN Interface: bond0
- MAC Address: 00:50:99:E2:3E:52
- Enable IPv4
- Enable IPv4 DHCP
- IPv4 Address: 192.168.36.31
- IPv4 Subnet: 255.255.255.0
- IPv4 Gateway: 192.168.36.1
- Enable IPv6
- Enable IPv6 DHCP
- IPv6 Index: 0
- IPv6 Address: ::
- Subnet Prefix Length: 0
- Enable VLAN
- VLAN ID: 0
- VLAN Priority: 0

A 'Save' button is located at the bottom right of the form.

Enable LAN: Check the box to enable the selected channel.

LAN Interface: Lists the available LAN interfaces.

MAC Address: Displays the MAC Address of the device. This is a read-only field.

Enable IPv4: Check the box to enable the IPv4 for the selected channel.

Enable IPv4 DHCP: Check the box to enable IPv4 DHCP support for the selected channel.

IPv4 Address: Specify the static IPv4 address for the selected channel.

IPv4 Subnet Mask: Specify the static IPv4 subnet mask for the selected channel.

IPv4 Default Gateway: Specify the static IPv4 default gateway for the selected channel.

Enable IPv6: Check the box to enable the IPv6 for the selected channel.

Enable IPv6 DHCP: Check the box to enable IPv6 DHCP support for the selected channel.

IPv6 Index: Specify a static IPv6 Index to be configured for the selected channel. E.g.: 0

IPv6 Address: Specify a static IPv6 address to be configured to the device for the selected channel. E.g.: 2004::2010

Subnet Prefix length: Specify the subnet prefix length for the IPv6 settings.

Default Gateway: Specify v6 default gateway for the IPv6 settings.

Enable VLAN: Check the box to enable the VLAN support for selected interface.

VLAN ID: The Identification for VLAN configuration.

VLAN Priority: The priority for VLAN configuration.

6.6.2 DNS Configuration

This page is used to manage the DNS settings.

DNS Enabled: Check the box to enable the DNS support.

mDNS Enable: Check the box to enable the mDNS support.

Host Name Settings: Choose either Automatic or Manual settings.

Host Name: It displays host name of the device. If the Host setting is chosen as Manual, then specify the host name of the device.

BMC Interface: To register the BMC through the Interfaces.

Register BMC: To register BMC through registration method.

Registration Method: To register the BMC are through NS Update or DHCP Client FQDN or Hostname.

TSIG Authentication Enabled: Check this box to enable TSIG authentication while registering DNS via Nupdate. Separate TSIG files can be uploaded for each LAN interface.

Current TSIG Private File: The information of Current TSIG private file along with its uploaded date/time will be displayed (read only).

New TSIG Private File: Browse and navigate to the TSIG private file, the file should be of private type.

Domain Setting: Select whether the domain interface will be configured manually or automatically.

Domain Interface: This field will be present if specify Domain Setting to Automatic, the field is used to display the domain interface of the device.

Domain Name: This field will be present if specify Domain Setting to Manual, the field is used to specify the domain name of the device.

Domain Name Server Setting: Select whether the DNS interface will be configured manually or automatically.

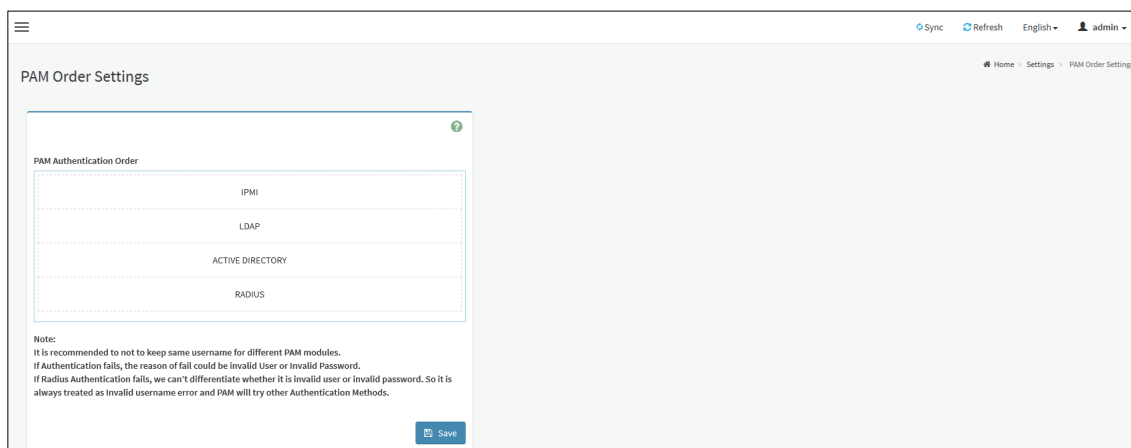

DNS Interface: This field will be present if specify Domain Name Server Setting to Automatic, the field is used to specify the interface to be used.

IP Priority: This field will be present if specify Domain Name Server Setting to Automatic, the field is used to select the IP Priority. If IP priority is IPv4, 2 IPv4 and 1 IPv6 DNS servers are used. If IP priority is IPv6, 1 IPv4 and 2 IPv6 DNS servers are used.

DNS Server 1, 2 & 3: This field will be present if specify Domain Name Server Setting to Manual, the field is used to specify the DNS (Domain Name System) server address to be configured for the BMC.

6.7 PAM Order Settings

This page is used to configure the PAM ordering for user authentication.

PAM Authentication Order: It shows the list of available PAM modules supported in BMC. Click and Drag the required PAM module to change its order.

NOTE

1. It is recommended not keeping the same username for different PAM modules.
2. If Authentication fails, the reason for failure could be invalid user or invalid password.
3. If Radius Authentication fails, we can't differentiate whether it is invalid user or invalid password. So it is always treated as Invalid username error and PAM will try other Authentication Methods.
4. If AD contains secret username & password as empty, Authentication fails will be always treated as Invalid Password error. For Invalid Password error PAM will not try other Authentication Methods. So it is recommended keeping AD in the last location in PAM order.

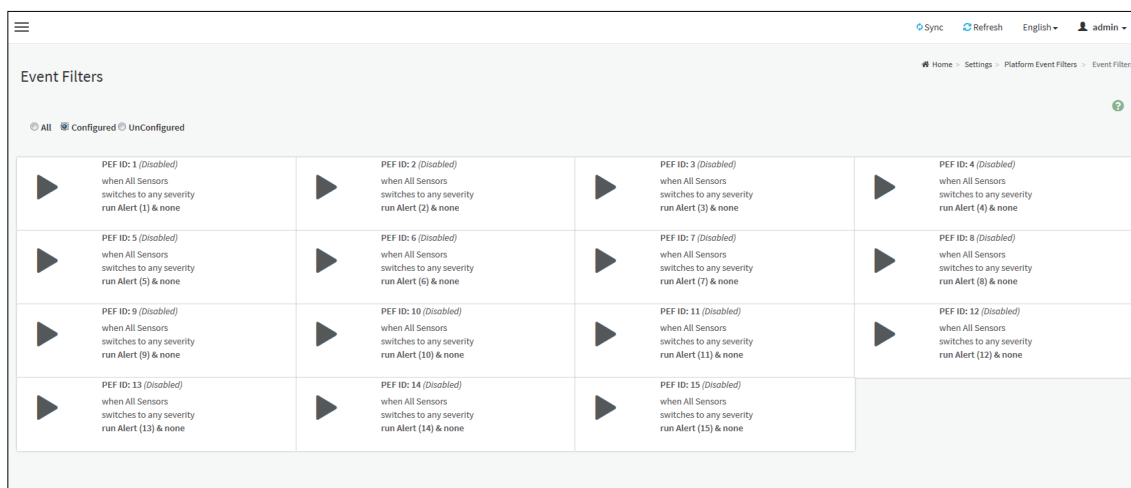

6.8 Platform Event Filter

Platform Event Filter (PEF) provides a mechanism for configuring the BMC to take selected actions on event messages that it receives or has internally generated. These actions include operations such as system power-off, system reset, as well as triggering the generation of an alert.

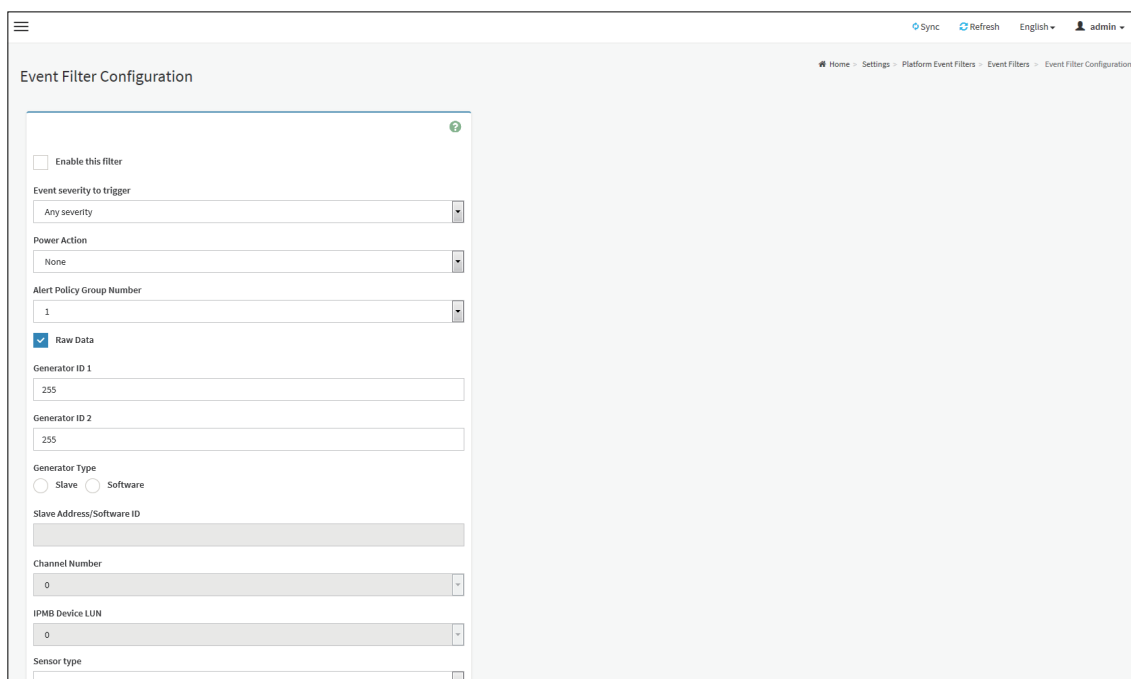

6.8.1 Event Filters

This page is used to configure Event filters. You can modify or add new event filter entry from here. By default, 15 event filter entries are configured among the 40 available slots.

Event Filter Configuration: Click the Event Filters section to configure the event filters in the available slots.

Enable this filter: Check the box to enable the PEF settings.

Event Severity to trigger: Select any one of the Event severity from the list.

Power Action: Select any one of the power action either Power down, Power reset or Power cycle from the drop-down list

Alert Policy Group Number: Select any one of the alert policy group number from the drop-down list.

Raw Data: Check the box to fill the Generator ID with raw data.

Generator ID 1: Enter the raw generator ID1 data value.

Generator ID 2: Enter the raw generator ID2 data value.

Generator Type: Choose the event generator as slave address - if event is generated from IPMB.

Slave Address/Software ID: Specify corresponding I2C slave address or system software ID.

Channel Number: Choose the particular channel number through which the event message is received over. Choose "0" if the event message is received via the system interface, primary IPMB, or internally generated by the BMC.

IPMB Device LUN: Choose the corresponding IPMB device LUN if event is generated by IPMB.

Sensor type: Select the type of sensor that will trigger the event filter action.

Sensor name: Choose the particular sensor from the sensor list.

Event Options: Choose event option to be either all events or sensor specific events.

Event Trigger: Enter the raw event/reading type value.

Event Data 1 AND Mask: Indicate wildcarded or compared bits.

Event Data 1 Compare 1 & Event Data 1 Compare 2: Indicate whether each bit position's comparison is an exact comparison or not.

Event Data 2 AND Mask: Similar to Event Data 1 AND Mask.

Event Data 2 Compare 1 & Event Data 2 Compare 2: Similar to Event Data 1 Compare 1 and Event Data 1 Compare 2 respectively.

Event Data 3 AND Mask: Similar to Event Data 1 AND Mask.

Event Data 3 Compare 1 & Event Data 3 Compare 2: Similar to Event Data 1 Compare 1 and Event Data 1 Compare 2 respectively.

6.8.2 Alert Policies

This page is used to configure the Alert Policy for the PEF configuration. You can add, delete or modify an entry in this page.

Alert Policies			
<p>Group: 1 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 2 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 3 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 4 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>
<p>Group: 5 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 6 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 7 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 8 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>
<p>Group: 9 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 10 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 11 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 12 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>
<p>Group: 13 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 14 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 15 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>	<p>Group: 16 (Disabled) Always send alert to this destination LAN Channel: 1 Sent To: 0</p>

Alert Policies: Click the Alert Policies section to configure the alert policies in the available slots.

Policy Group Number: Displays the Policy number of the configuration.

Enable this alert: Check the box to enable the policy settings.

Policy Action: Choose any one of the Policy set values from the list.

LAN Channel: Choose a particular channel from the available channel list.

Destination Selector: Choose a particular destination from the configured destination list.

Event Specific Alert String: Check the box to specify event-specific Alert String.

Alert String Key: Specify which string is to be sent for this Alert Policy entry.

6.8.3 LAN Destinations

This page is used to configure the LAN destination of PEF configuration.

LAN Destination Configuration: Select any empty slot to configure LAN Destinations.

The screenshot shows the 'LAN Destination Configuration' page. The form is titled 'LAN Destination Configuration' and contains the following fields:

- LAN Channel: 1
- LAN Destination: 1
- Destination Type: SNMP Trap, E-Mail
- SNMP Destination Address: [Text input field]
- BMC Username: [Dropdown menu]
- Email Subject: [Text input field]
- Email Message: [Text input field]

At the bottom of the form, there are two buttons: 'Delete' (red) and 'Save' (blue).

LAN Channel: Displays LAN Channel Number for the selected slot (read only).

LAN Destination: Displays ID for setting Destination Selector of Alert Policy (read only).

SNMP Destination Address: Destination type can be either an SNMP Trap or an E-mail alert. For E-mail alerts, the four fields - SNMP Destination Address, BMC User Name, Email subject and Email message needs to be filled. For SNMP Trap, only the SNMP Destination Address has to be filled.

BMC User Name: If Destination type is Email Alert, then choose the user to whom the email alert has to be sent.

Email Subject & Email Message: These fields must be configured if email alert is chosen as destination type. An email will be sent to the configured email address of the user in case of any severity events with a subject specified in subject field and will contain the message field's content as the email body. These fields are not applicable for 'AMI-Format' email users.

6.9 Services

This page is used to displays the basic information about services running in the BMC.

The screenshot shows the 'Services' page with a table of services. The table has the following columns: Service, Status, Interfaces, Non Secure Port, Secure Port, Timeout, and Maximum Sessions. The services listed are:

Service	Status	Interfaces	Non Secure Port	Secure Port	Timeout	Maximum Sessions
web	Active	bond0	80	443	1800	20
kvm	Active	bond0	7578	7582	1800	2
cd-media	Active	bond0	5120	5124	N/A	4
fd-media	Active	bond0	5122	5126	N/A	4
hd-media	Active	bond0	5123	5127	N/A	4
ssh	Active	NA	N/A	22	600	N/A
solssh	Inactive	bond0	52123	N/A	60	N/A

Services: Displays service name of the selected slot (read only).

Status: Displays the current status of the service, either active or inactive state.

Interfaces: It shows the interface in which service is running.

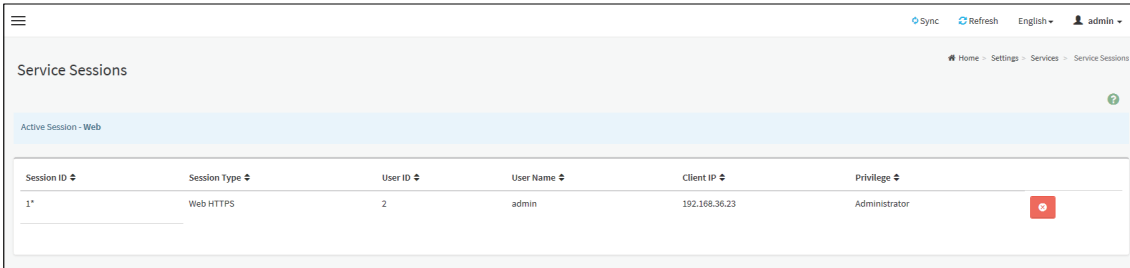

Nonsecure Port: Displays non secure port number of the service.

Secure Port: Displays secure port number of the service.

Timeout: Displays the session timeout value of the service.

Maximum Sessions: Displays the maximum number of allowed sessions for the service.

View the active sessions: Click View icon  to view the details about the active sessions for the service.

Session ID	Session Type	User ID	User Name	Client IP	Privilege
1	Web HTTPS	2	admin	192.168.36.23	Administrator

Session ID: Displays the ID of the active sessions.

Session Type: Displays the type of the active sessions.

User ID: Displays the ID of the user.

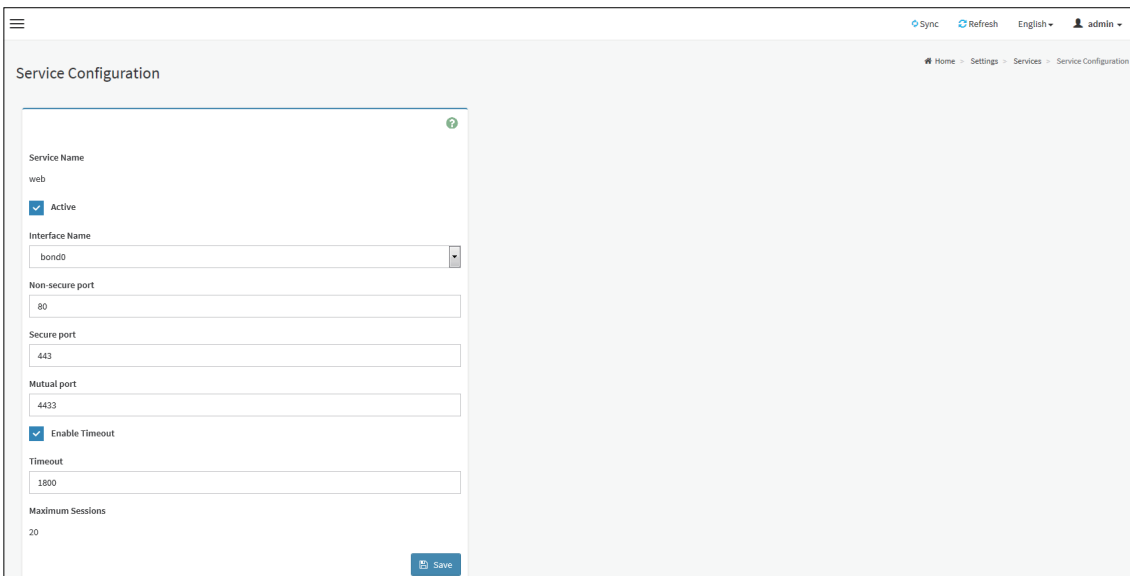

User Name: Displays the name of the user.

Client IP: Displays the IP addresses that are already configured for the active sessions

Privilege: Displays the access privilege of the user.

Terminate Session: Click Terminate icon  to terminate the particular session of the service.

Edit the existing service: Click Edit icon  to modify the configuration of the service.

Service Configuration

Service Name
web

Active

Interface Name
bond0

Non-secure port
80

Secure port
443

Mutual port
4433

Enable Timeout

Timeout
1800

Maximum Sessions
20

Save

Service Name: Displays service name of the selected slot(read only).

Active: Check the box to enable the service.

Interface Name: Choose any one of the available interfaces from the drop-down list.

Non-secure Port: Configure non secure port number for the service.

Secure Port: Configure secure port number for the service.

Mutual Port: Configure mutual port number for the service.

Enable Timeout: Check the box to enable the timeout function.

Timeout: Configure the session timeout for the service.

Maximum Sessions: Displays the maximum number of allowed sessions for the service.

6.10 SMTP Settings

This is used to configure the SMTP settings of the device.

The screenshot shows the 'SMTP Settings' configuration page. The interface includes a top navigation bar with 'Sync', 'Refresh', 'English', and 'admin' options. The main content area is titled 'SMTP Settings' and contains the following fields and options:

- LAN Interface:** A dropdown menu currently showing 'bond0'.
- Sender Email ID:** An empty text input field.
- Primary SMTP Support:** A checked checkbox.
- Primary Server Name:** An empty text input field.
- Primary Server IP:** An empty text input field.
- Primary SMTP port:** A text input field containing the value '25'.
- Primary Secure SMTP port:** A text input field containing the value '465'.
- Primary SMTP Authentication:** An unchecked checkbox.
- Primary Username:** A text input field with a greyed-out background.
- Primary Password:** A text input field with a greyed-out background.
- Primary SMTP SSLTLS Enable:** An unchecked checkbox.
- Primary SMTP STARTTLS Enable:** An unchecked checkbox.
- Secondary SMTP Support:** An unchecked checkbox.
- Save:** A blue button at the bottom right of the form.

LAN Interface: Displays the list of LAN channels available.

Sender Email ID: Enter the valid Sender Email ID on the SMTP Server.

Primary SMTP Support: Check the box to enable SMTP support for the BMC.

Primary Server Name: Enter the Machine Name of the SMTP Server.

Primary SMTP IP: Enter the IP address of the SMTP Server.

Primary SMTP Port: Specify the SMTP Port.

Primary Secure SMTP Port: Specify the SMTP Secure Port.

Primary SMTP Authentication: Check the box to enable SMTP Authentication.

Primary Username: Enter the username to access SMTP Accounts.

Primary Password: Enter the password for the SMTP User Account.

Primary SMTP SSLTLS Enable: Check the box to enable SMTP SSLTLS protocol.

Primary SMTP STARTTLS Enable: Check the box to enable SMTP STARTTLS protocol.

Upload SMTP CA Certificate File: This field will be present if enable SMTP SSLTLS Enable or STARTTLS Enable, the field is used to upload CACERT key file.

Upload SMTP Certificate File: This field will be present if enable SMTP SSLTLS Enable or STARTTLS Enable, the field is used to upload CERT key file.

Upload SMTP Private Key: This field will be present if enable SMTP SSLTLS Enable or STARTTLS Enable, the field is used to upload SMTP key file.

Secondary SMTP Support: Check the box to enable secondary SMTP support for the BMC.

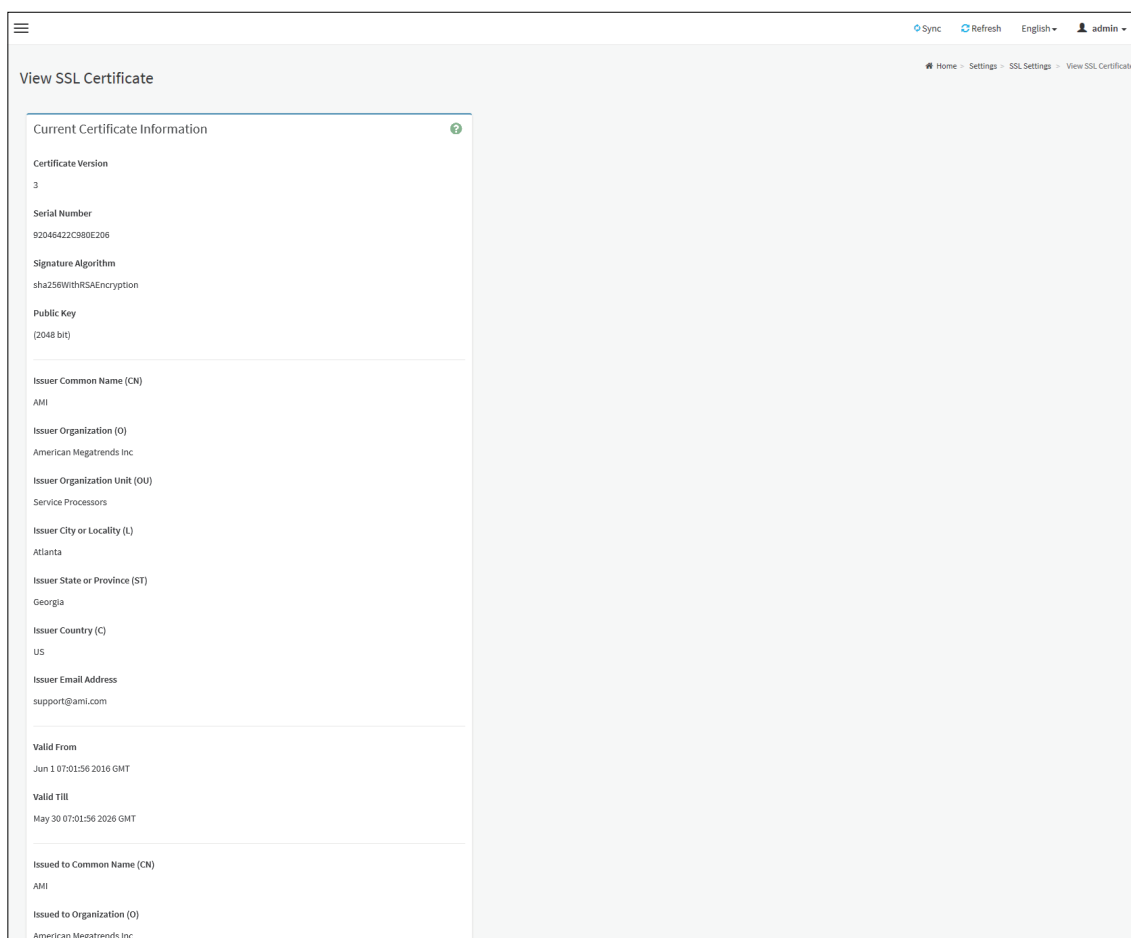

6.11 SSL Settings

This page is used to configure SSL certificate for the BMC.

6.11.1 View SSL certificate

This page is used to view the uploaded SSL certificate in readable format.

NOTE

This page provides a simple method to generate SSL certificate and it is not issued by a trusted Certificate Authority, you can upload a trusted certificate by yourself, if necessary.

6.11.2 Generate SSL certificate

This page is used to generate the SSL certificate based on configuration details.

The screenshot shows a web interface titled "Generate SSL Certificate". It features a form with the following fields:

- Common Name (CN): Text input field.
- Organization (O): Text input field.
- Organization Unit (OU): Text input field.
- City or Locality (L): Text input field.
- State or Province (ST): Text input field.
- Country (C): Text input field.
- Email Address: Text input field.
- Valid for: Text input field with "in days" below it.
- Key Length: Dropdown menu showing "2048 bits".

 A "Save" button is located at the bottom right of the form. The page header includes "Sync", "Refresh", "English", and "admin" user information. The breadcrumb trail is "Home > Settings > SSL Settings > Generate SSL Certificate".

Common Name(CN): Common name for which certificate is to be generated.

Organization(O): Organization name for which the certificate is to be generated.

Organization Unit(OU): Over all organization section unit name for which certificate is to be generated.

City or Locality(L): City or Locality of the organization.

State or Province(ST): State or Province of the organization.

Country(C): Country code of the organization.

Email Address: E-mail Address of the organization.

Valid for: Validity of the certificate.

Key Length: The key length bit value of the certificate.

6.11.3 Upload SSL certificate

This page is used to upload the certificate and private key file into the BMC.

The screenshot shows a web interface titled "Upload SSL Certificate". It features the following fields and controls:

- Current Certificate: Text input field showing "Wed Nov 14 02:36:45 2018".
- New Certificate: Text input field with a blue "Upload" button to its right.
- Current Private Key: Text input field.
- New Private Key: Text input field with a blue "Upload" button to its right.
- Upload CA Certificate: A checked checkbox.
- New CA Certificate: Text input field with a blue "Upload" button to its right.

 A "Save" button is located at the bottom right of the form. The page header includes "Sync", "Refresh", "English", and "admin" user information. The breadcrumb trail is "Home > Settings > SSL Settings > Upload SSL Certificate".

Current Certificate: Displays current certificate and uploaded date/time (read only).

New Certificate: Browse and navigate to the certificate file, the file should be of pem type

Current Private Key: Displays current Private key information (read only).

New Private Key: Browse and navigate to the private key file, the file should be of the type pem.

Upload CA Certificate: Check this option to upload CA Certificate file.

New CA Certificate: Browse and navigate to the CA certificate file.

6.12 System Firewall

This page is used to configure the firewall settings. The firewall rule can be set for an IP or range of IP Addresses or Port numbers.

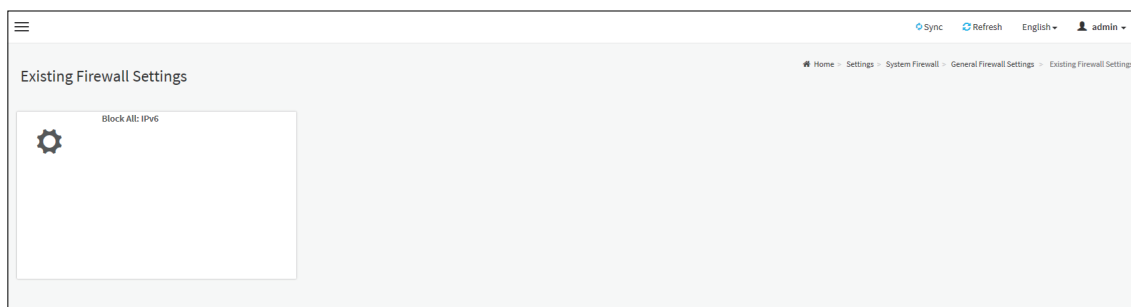

6.12.1 General Firewall Settings

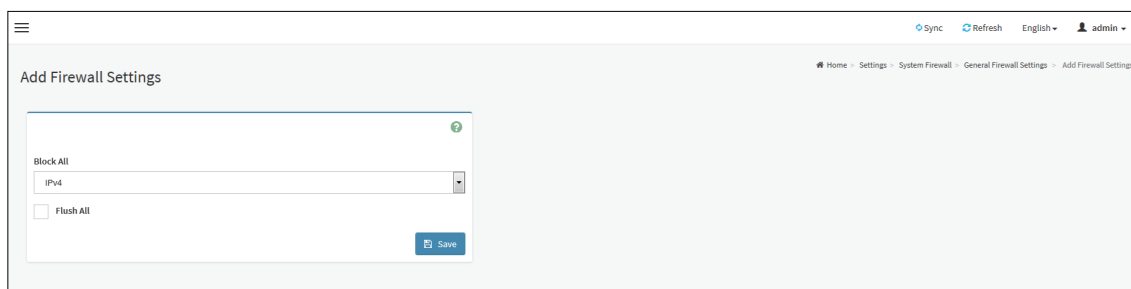

This page is used to configure general firewall settings.

Existing Firewall Settings: This page is used to displays existing firewall settings.

Add Firewall Settings: This page is used to displays add firewall settings.

Block All: This option will block all incoming IPs and Ports.

Flush All: This option is used to flush all the system firewall rules.

6.12.2 IP Firewall Rules

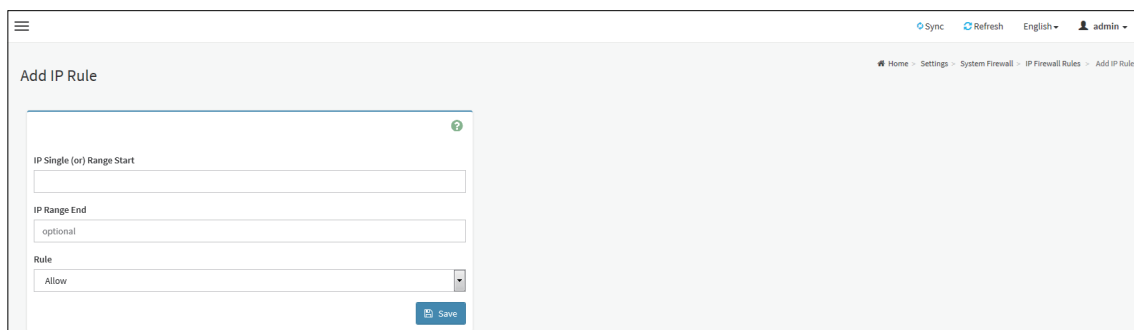

This page is used to add a new IP Address or Range to firewall settings.

Existing IP Rules: This page is used to displays existing IP rules.

Add IP Rule: This page is used to displays add IP rule settings.

IP Single (or) Range Start: This field is used to configure the IP address or range of IP addresses.

IP Range End: This field is used to configure the IP range end of IP addresses.

Rules: This field is used to determine the rule to Allow or Block.

6.12.3 Port Firewall Rules

This page is used to add a new Port or Range to firewall settings.

Existing Port Rules: This page is used to displays existing port rules.

Add Port Rule: This page is used to displays add port rule settings.

Port Single (or) Range Start: This field is used to configure the port number or range of port numbers.

Port Range End: This field is used to configure the port range end of port numbers.

Protocol: This field is used to configure the protocol.

Network Type: This field is used to configure the network type.

Rule: This field is used to determine the rule to Allow or Block.

6.13 User Management

This page displays the current list of user slots for the server. You can add a new user and modify or delete the existing users.

anonymous (Disabled) Administrator KVM VMedia	admin (Active) Administrator KVM VMedia	(Disabled)	(Disabled)
(Disabled)	(Disabled)	(Disabled)	(Disabled)
(Disabled)	(Disabled)		

Add a new user: To add a new user, select a free section and click on the empty section.

Username: Enter the name of the user.

Password Size: Either 16 Bytes or 20 Bytes password size can be chosen.

Password: Enter the password of the user.

Confirm Password: Confirm the password.

Enable User Access: Enabling user access will intern assign the IPMI messaging privilege to user.

Network Privilege: Select the network privileges assigned to the user.

Serial Privilege: Select the serial privileges assigned to the user.

KVM Access: Assign the KVM privilege for the user.

VMedia Access: Assign the VMedia privilege for the user.

NOTE

Both KVM and VMedia privilege will enable(disable) automatic when Network Privilege is administrator(other).

Email Format: Specify the format for the email. Two types of formats are available.

- AMI-Format: The subject of this mail format is 'Alert from (your Host name)'. The mail content shows sensor information, ex: Sensor type and Description.
- Fixed-Subject Format: This format displays the message according to user's setting. You must set the subject and message for email alert.

Email ID: Enter the email ID of the user. If the user forgets the password, the new password will be mailed to the configured email address.

Existing SSH Key: Displays the uploaded SSH key information(read only).

Upload SSH Key: Upload the public SSH key file.

Modify user: To modify the existing user, click on the active user tab.

The screenshot displays the 'User Management Configuration' page. The form is for a user named 'admin'. The 'Username' field contains 'admin'. There is a 'Change Password' checkbox which is unchecked. The 'Password Size' is set to '16 bytes'. The 'Password' and 'Confirm Password' fields are empty. The 'Enable User Access' checkbox is checked. The 'Network Privilege' is set to 'Administrator'. The 'Serial Privilege' is set to 'None'. The 'KVM Access' and 'VMedia Access' checkboxes are checked. The 'Email Format' is set to 'AMI-Format'. The 'Email ID' field is empty. The 'Existing SSH Key' field shows 'Not Available'. There is an 'Upload SSH Key' button. At the bottom, there are 'Delete' and 'Save' buttons.

6.14 Video Recording

This page is used to configure video recording settings.

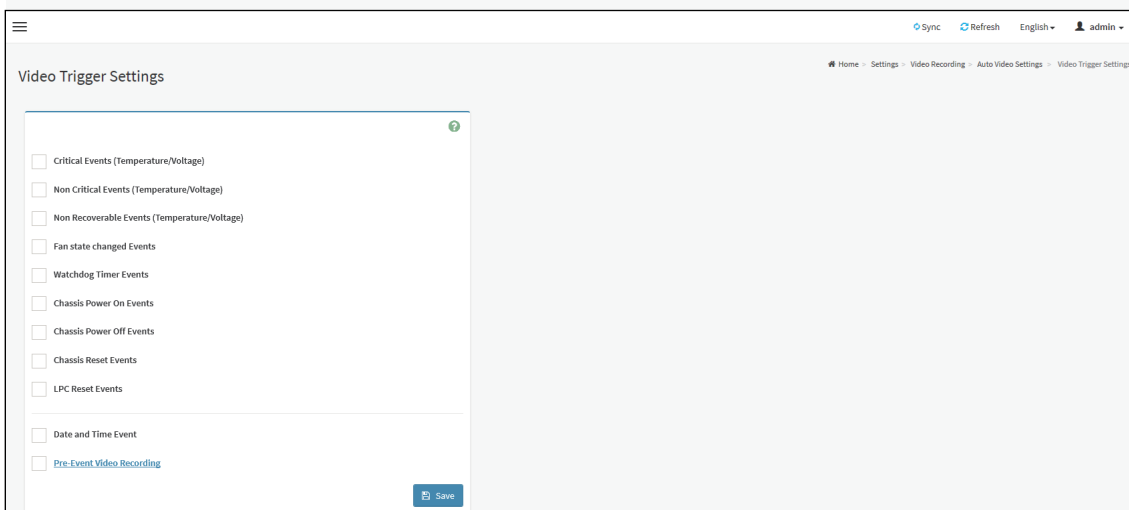

6.14.1 Auto Video Settings

This page is used to configure auto video recording settings.

6.14.1.1 Video Trigger Settings

This page is used to configure the events that will trigger auto video recording function of the KVM server.

Critical Events (Temperature/Voltage): Trigger the recording by the critical events for Temperature/Voltage sensor.

Non Critical Events (Temperature/Voltage): Trigger the recording by the non-critical events for Temperature/Voltage sensor.

Non Recoverable Events (Temperature/Voltage): Trigger the recording by the non-recoverable events for Temperature/Voltage sensor.

Fan state changed Events: Trigger the recording by all fan sensor events

Watchdog Timer Events: Trigger the recording when watchdog timer be triggered.

Chassis Power On Events: Trigger the recording by system power on events (DC on).

Chassis Power Off Events: Trigger the recording by system power off events (DC off).

Chassis Reset Events: Trigger the recording by system reset events.

LPC Reset Events: Trigger the recording by Host LPCRESET event.

Date and Time Event: Trigger the recording by specific date and time.

Pre-Event Video Recording: Select Crash Reset either Pre-crash or Pre-reset.

6.14.1.2 Video Remote Storage

This page is used to configure the remote storage path.

Record Video to Remote Server: Check the box to enable remote video support. If remote video support is enabled, then the video files will be stored in remote path.

Maximum Dumps: Enter maximum dumps of the video.

Maximum Duration(Sec): Enter maximum duration of the video.

Maximum Size(MB): Enter maximum size of the video.

Server Address: Specify server address of the server.

Path in Server: Select the Share Type (NFS/CIFS). If the selected share type is (CIFS), enter the User Name, Password and Domain Name in the respective fields.

6.12.1.3 Pre-Event Video Recordings

This page used to configure the Pre-Event video recording configurations.

Video Quality: To set video quality, select ranges from the drop-down list.

Compression Mode: To set compression mode, select modes from the drop-down list.

Frames Per Second: To set number of frames per second, select frames/sec (1-4) from the drop-down list.

Video Duration: To set duration of video, select second (10-60) from the drop-down list.

6.15 Keep Share NIC Link Up

This page is used to configure share NIC(NCSI) PHY link up setting.

Enable: Check the box to enable Keep Share NIC Link Up, share NIC PHY will keep link up, and it could avoid share NIC disconnection while system reset.

Chapter 7. Remote Control

This page is used to launch the remote console redirection.

Launch KVM: Click the button to open remote control KVM page.

Launch Java KVM: Click the button to open Java KVM application.

Chapter 8. Image Redirection

This page is used to configure the images into BMC for redirection.

8.1 Remote Media

This page is used to configure the remote images into BMC for redirection.

Media Type	Media Instance	Image Name	Redirection Status	Connected Server Session	
CD/DVD	0	rhel-server-6	-	N/A	▶ ▲
CD/DVD	1	rhel-server-6	-	N/A	▶ ▲
CD/DVD	2	rhel-server-6	-	N/A	▶ ▲
CD/DVD	3	rhel-server-6	-	N/A	▶ ▲
Floppy	0		-	N/A	▶ ▲
Floppy	1		-	N/A	▶ ▲
Floppy	2		-	N/A	▶ ▲
Floppy	3		-	N/A	▶ ▲
Hard disk	0		-	N/A	▶ ▲
Hard disk	1		-	N/A	▶ ▲
Hard disk	2		-	N/A	▶ ▲
Hard disk	3		-	N/A	▶ ▲

Media Type: Displays type of Media such as CD/DVD, Floppy and Hard-disk.

Media Instance: Displays total media instance count.

Image Name: Displays the default recovery image name on the server.

Status: Displays the status of the media.

Session Index: Displays Media Server Session Index.

Start/Stop Redirection: To start or stop media redirection.

Pause: To pause the media redirection.

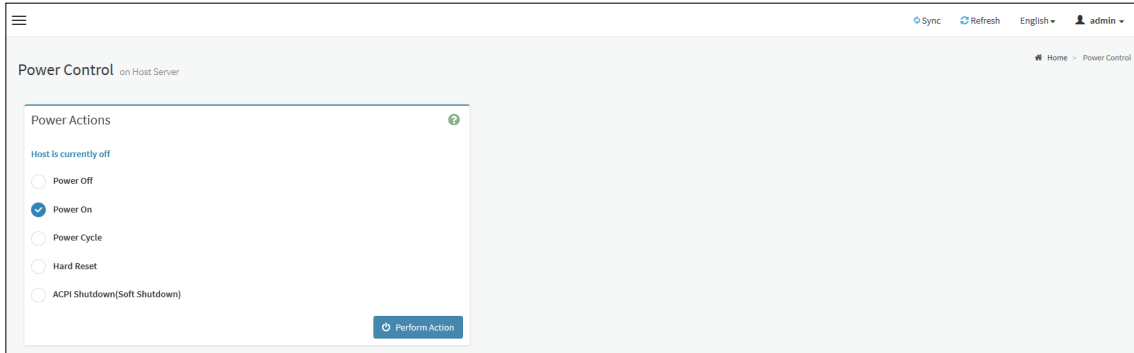

Refresh Image List: To get latest Image lists from the Remote Storage.

NOTE

To configure the image, you need to enable Remote Media support first.

Chapter 9. Power Control

This page is used to view and control the power of the server.

Power Off: Select this option to immediately power off the server.

Power On: Select this option to power on the server.

Power Cycle: Select this option to first power off, and then reboot the system (cold boot).

Hard Reset: Select this option to reboot the system without powering off (warm boot).

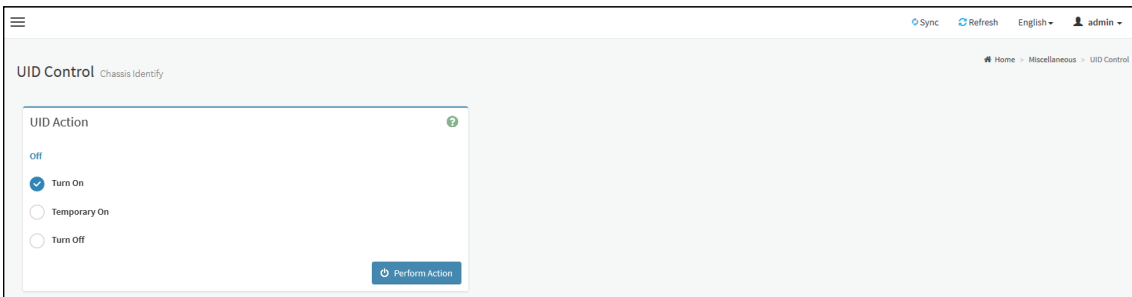

ACPI Shutdown(Soft Shutdown): Select this option to initiate operating system shutdown prior to the shutdown.

Chapter 10. Miscellaneous

This page is used to configure miscellaneous settings.

10.1 UID Control

Trun On: Select this option to turn on UID.

Temporary On: Select this option to temporary turn on UID.(15 sec blink)

Turn Off: Select this option to turn off UID.

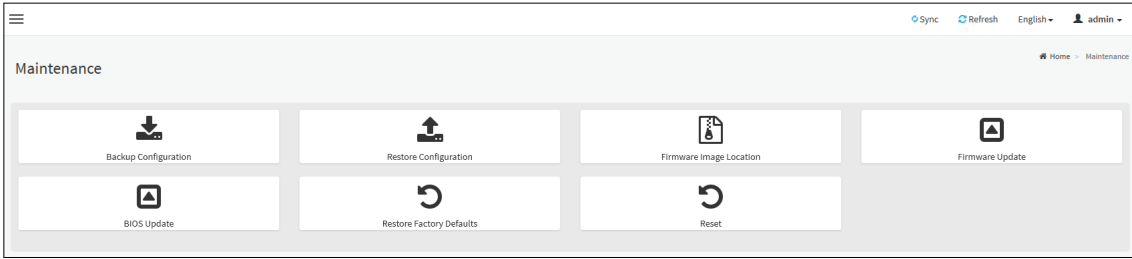

10.2 Post Snoop

Post 80h: Click Refresh button to get the last POST code of BIOS.(read only)

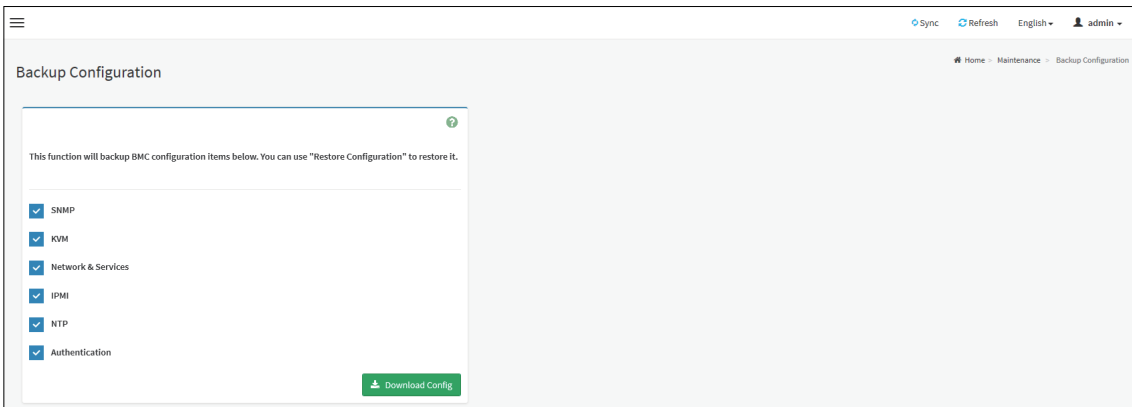

Chapter 11. Maintenance

This page is used to do maintenance tasks on the device.

11.1 Backup Configuration

This page is used to back up the configuration.

Download Config: To download and save the configuration files backup from BMC to client system.

11.2 Restore Configuration

This page is used to restore the configuration files from the client system to the BMC.

Config File: This option is used to select the file which was backup earlier.

Upload: To upload the backup file to restore the backup files.

11.3 Firmware Image Location

This page is used to configure firmware image into the BMC.

Web Upload during flash: Select the option to transfer the firmware image into the BMC via HTTP/HTTPS.

TFTP Server: Select the option to transfer the firmware image into the BMC via TFTP.

TFTP Server Address: This field will be present if enable TFTP Server, the field is used to configure the address of TFTP server.

TFTP Image Name: This field will be present if enable TFTP Server, the field is used to configure full source path with filename of TFTP server.

TFTP Retry Count: This field will be present if enable TFTP Server, the field is used to configure the number of times to be retried in case a transfer failure occurs.

11.4 Firmware Update

This page is used to update BMC firmware.

Preserve all Configuration: To preserve all configuration.

Preserve Network Settings: To preserve network settings.

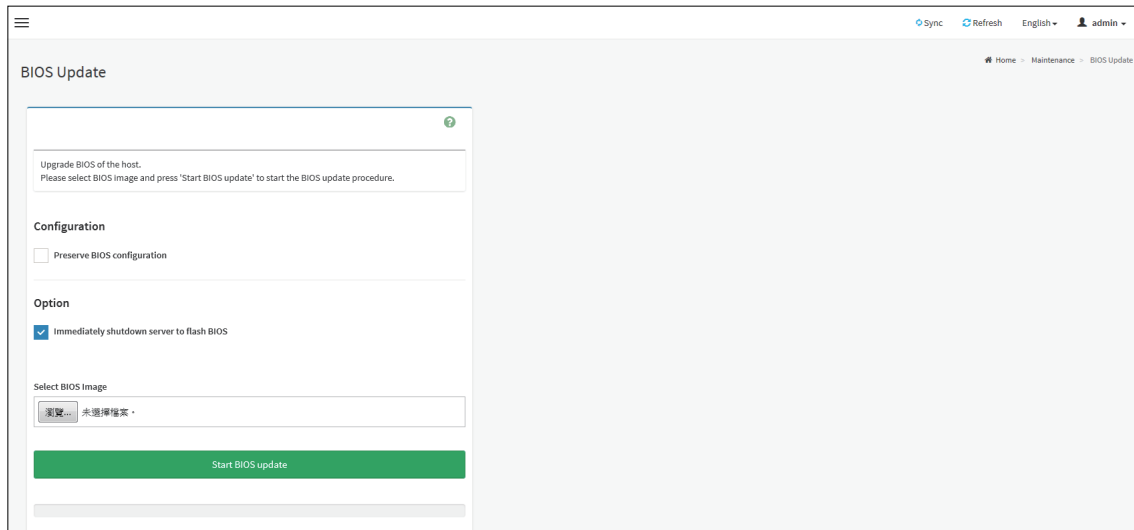

Preserve User Account: To preserve user accounts.

Select Firmware Image: To Select the firmware image to be uploaded.

Start Firmware Update: To Start the firmware update.

11.5 BIOS Update

This page is used to update BIOS firmware.

Preserve BIOS configuration: To preserve BIOS configuration.

Immediately shutdown server to flash BIOS: To shutdown server immediately to flash BIOS.

Start Firmware Update: To Start the BIOS update.

11.6 Restore Factory Defaults

This page is used to restore the factory defaults of the device firmware.

Restore Factory Defaults: Click the button to restore configuration to factory default settings, the following settings will be restored.

- SDR
- SEL
- IPMI
- Network
- NTP
- SSH
- KVM
- Authentication
- Syslog
- Web

11.7 Reset

This page is used to reset BMC device.

Reset: Click the button to reset the device.

11.8 Sign Out

Click Sign Out to perform log out from the Web GUI. A Warning message will be prompted you to proceed further, click OK to log out else Cancel to retain the Web GUI.

Chapter 12. Technical Support

www.aicipc.com

Taiwan, Global Headquarters

Address: No. 152, Section 4,
Linghang N. Rd, Dayuan District,
Taoyuan City 337, Taiwan
